Professional Objective Seeking a software development career with advancement potential in an intellectually stimulating environment that fosters collaboration, creativity and cleverness

Education **Bachelor of Arts**, May 2002
Covenant College, Lookout Mountain, Georgia
Major: Chemistry **Minor:** Mathematics, Computer Science
GPA within Computer Science courses (28 credits) 3.94

Related Employment Experience *Software Developer, Aetherquest Solutions (June 2008 - present)*
My responsibilities chiefly include testing, debugging, enhancing, and customizing the flagship product, an end-to-end web technology platform for conferences written in PHP and using Zend Framework. In addition, I sometimes build small-scale CMS-enabled websites for the company's web-design department. These smaller sites are written in a custom-made Cake package I developed.

Web Programmer, Daily News-Record (February 2008 – June 2008)
Maintained, enhanced, and debugged the website dnronline.com, the online home of The Daily News-Record newspaper. Mostly this entailed integrating and upgrading off-the-shelf components into the website, as well as writing scripts to perform specific tasks to make the site perform better.

Webmaster, Inside Success Radio (October 2005 – December 2007)
Designed the database-driven website, insidesuccessradio.com (using php-mysql). This involved developing a custom CMS. This position also required working with cPanel and WHM to interface with an Apache-based dedicated server. Most database development took place using phpMyAdmin.

Php Developer, Bargain Publishers (August 2005 – December 2007)
Developed php applications including a contact-management system and content organization tool to help people coordinate email-based book promotion between numerous opt-in lists. Also developed a membership website-based tool called Edoc Wizard to help people publish their electronic content to Amazon. I was responsible for designing, prototyping, building, testing, maintenance and customer support. In the case of Edoc Wizard, I also drafted the initial proposal.
